

**PRODUCT NAME :**

UV REDUCER

**Description :**

"UV REDUCER" is a diluent for UV inks. Besides general UV inks, UV hybrid inks, and so forth. it is useable for most UV inks like special UV inks,

**Feature :**

Highly effective diluent.  
Effective in small quantity. (Adding 2% reduces tack value by approximately 1.)  
Improves ink flow  
Softens inks appearance.  
Applicable to both, offset as well as letterpress, printings.  
Does not affect adhesion of UV ink.  
Useable with almost all our UV ink products.

**Handling Instructions :**

When mixing with UV inks, use ink spatula to stir and mix well.  
"UV REDUCER" does not contain liquid photoreactive initiator. It may affect ink's curing or drying property when added in large quantity. Add only within 5%.  
Adding a large quantity can cause scumming in offset printing.
